

NEXEV

COMPANY PROFILE |
2022

WHO WE ARE

We are a new, dynamic and enterprising reality, the result of the union of professionals with long experience in the I-Tech world.

This has given rise to an exciting entrepreneurial initiative, visionary and daring in technological challenges, ready to transform the customer's need into a performing and personalized product.

We adopt an approach centered primarily on the person, according to which the end user, his ideas, his impressions, his satisfaction are at the center of each solution.

OUR PROMISE?

That of providing a **complete** and **effective** service, always with **fast** and **punctual delivery**.

We avoid waste, we keep costs under control, we **simplify** business management to make the working environment is more **functional** and **pleasant**.

WHAT WE OFFER

ENGAGING GRAPHIC INTERFACES

Minimized training times and low learning curve

INTER-OPERABLE SOFTWARE

Special ready-made frameworks for unit tests, APIs and technical documentation

LOW MAINTENANCE COSTS

Careful selection of third-party software, so that unnecessary licenses burden the customer

INNOVATIVE AND AGILE METHODOLOGY

We guarantee a cutting-edge product, developed side by side with the customer

USER EXPERIENCE

Great attention to specifications to carefully implement user interaction

MANUALS AND TECHNICAL DOCUMENTATION

Each product is accompanied by rigorous and structured documentation

OUR TECHNOLOGIES

Agile & Scrum

Our priority is to satisfy the customer, releasing valuable software, immediately and continuously.

We welcome changes in requirements, even at advanced stages of development. Agile processes leverage change for the customer's competitive advantage. The agile development allows to continuously update the specifications adapting them to every customer need, through a continuous exchange of opinions and information between the developer and the customer.

We work in small teams, developing iteratively and involving the customer to collect their feedback during the development process of each requested feature.

Our development and release methodologies

CI / CD is a method for the frequent distribution of apps to customers, which involves the introduction of automation in the development stages of the application. Primarily, it is based on the concepts of continuous integration, distribution and deployment. The CI / CD approach overcomes the difficulties associated with the integration of new code, a situation so problematic for the operational and development teams that it has been coined "in-hell of integration".

More specifically, the CI / CD method introduces constant automation and continuous monitoring throughout the application life cycle, from integration and testing to distribution and deployment. Collectively, these interconnected processes are referred to as "CI / CD flows" and are supported by development and operations teams that collaborate in an agile way.

Microservices

It is the approach to developing a single application, as a suite of small services.

Microservices are associated with cloud development and the support of the continuous integration and continuous development processes that accompany Agile development and the introduction of the DevOps method to accelerate the management of the application life cycle.

The benefits that can be obtained concern, in fact, the agility of the same (in particular the cloud-native ones), the scalability in the deployment and the time to market. On the developer side, the advantage of increased productivity and simpler debugging and maintenance are added.

Alongside microservices, we use technologies such as **Kubernetes**, the main container organizer, on Cloud Amazon Web Services.

ALWAYS UP TO DATE

We work with **formidable** tools and **relevant** technologies.

We intend to pave the way for a **simpler** and more **efficient** future.

The teamwork, the comparison and the continuous sharing, allows us to grow and reach more and more goals.

OUR LANGUAGES OF PROGRAMMING

The logo for JavaScript, consisting of the letters "JS" in a bold, black, sans-serif font centered on a solid yellow square background.

JS

The logo for TypeScript, consisting of the letters "TS" in a bold, white, sans-serif font centered on a solid blue square background.

TS

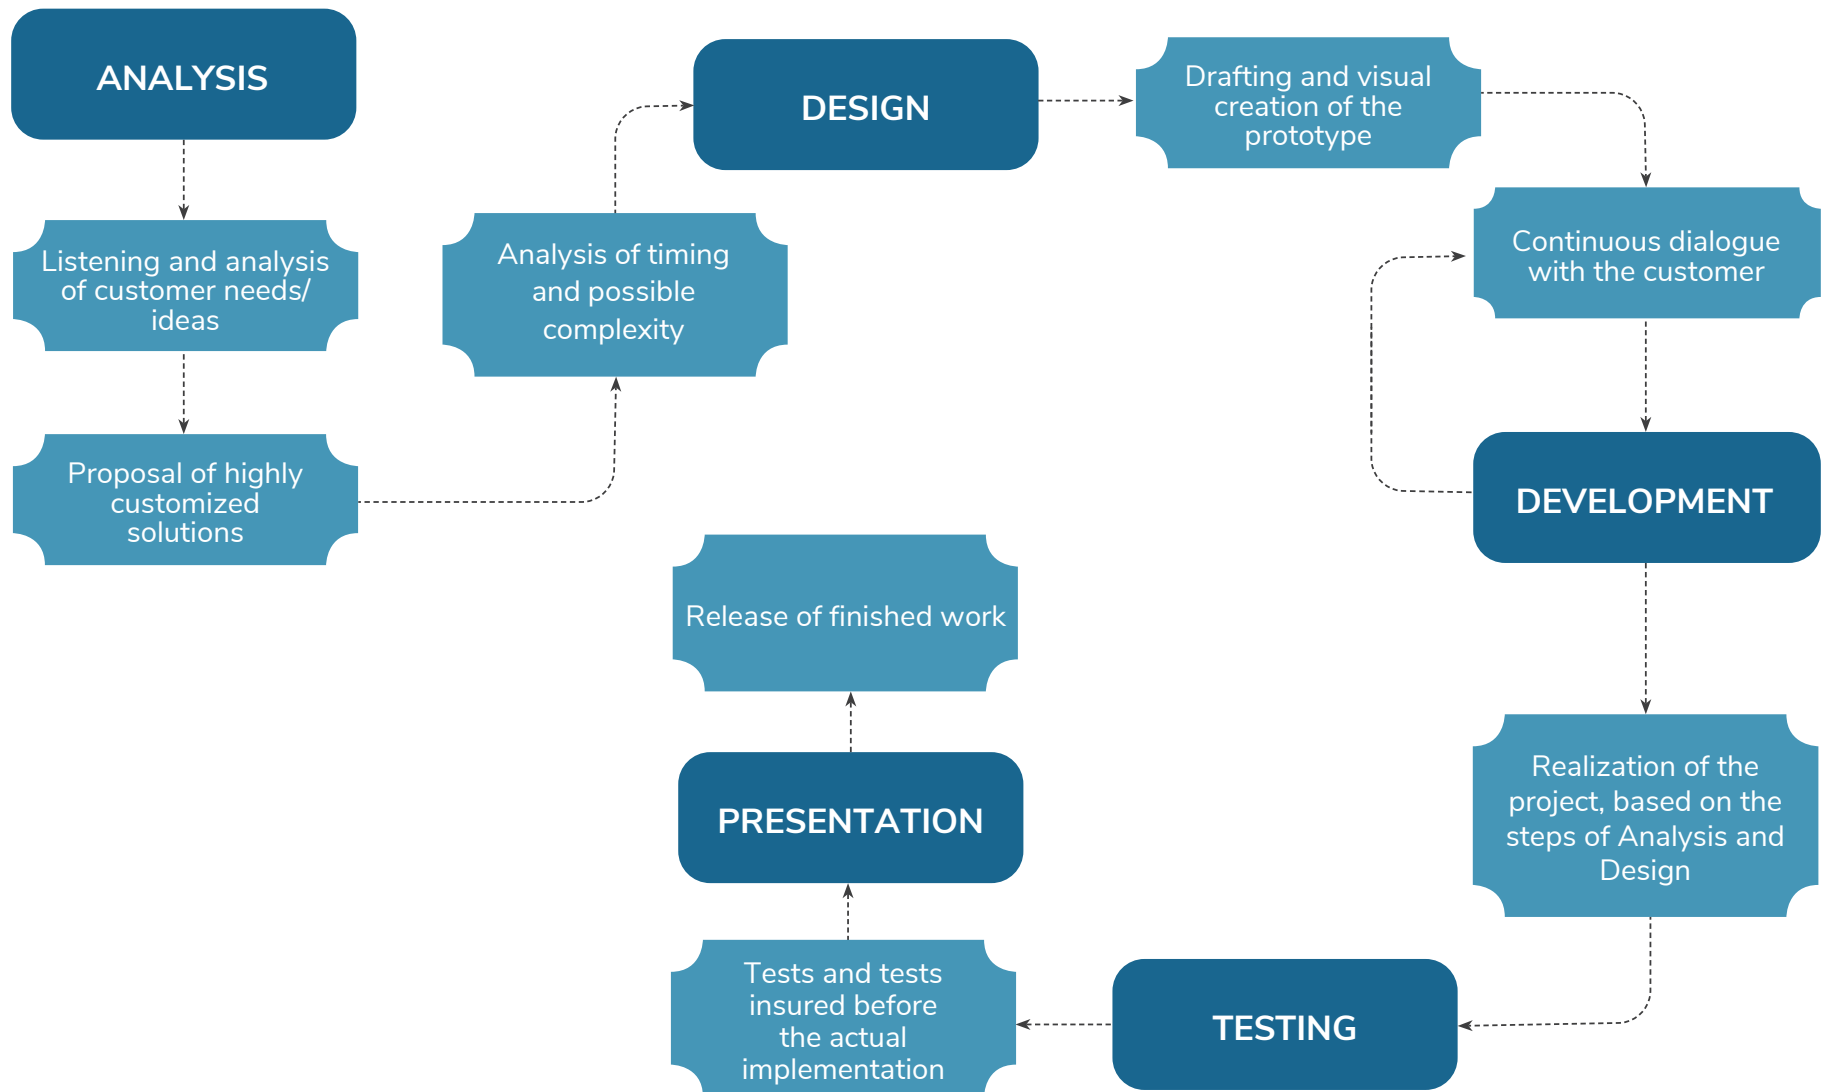

The logo for PHP, consisting of the lowercase letters "php" in a bold, italicized, black, sans-serif font centered inside a purple oval with a slight gradient.

php

The logo for Go, consisting of the word "GO" in a bold, blue, sans-serif font with a stylized blue arrow pointing to the right, positioned to the left of the letters.

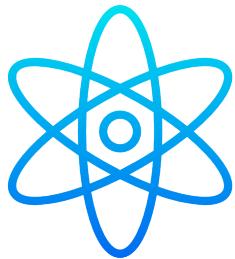

GO

MODUS OPERANDI

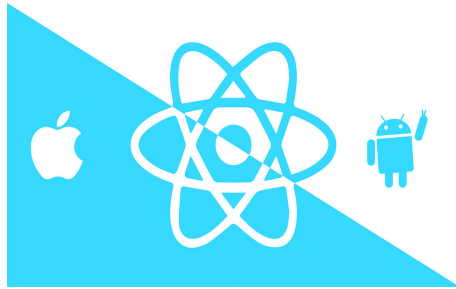

The tools of software development are of open source philosophy

More flexible technologies without licensing fees

REACT

It allows you to develop dynamic applications that do not need to reload the page to view the changed data. Even in development, changes made to the code can be displayed in real time, allowing speed, efficiency and flexibility.

REACT NATIVE

We use cross-platform technologies like React Native to create solutions that can be adapted to any type of device. This allows us to reduce development time and reach a large catchment area immediately.

NODE. JS

Industry leader in performance, thanks to its Event loop that ensures code execution server side asynchronous and parallel low latency always available even with a high load of requests.

MONGO DB

It is one of the most used DBMS of the nosql family and is even more used than some of the relational RDBMS.

The characteristics that make it so appreciated are:

- It is document-oriented, with the ability to embed data into subdocuments to avoid many unnecessary joins.
- It has a rich query language, which allows developers to quickly create powerful features with data.
- It is very consistent, so that applications can see data updates immediately.

OUR PRODUCTS

It is the **CRM** for Linkem's new fiber optic connection brand.

EFFICIENT

To provide a high-performance CRM it was necessary to design and rewrite it from scratch with modern and high-performance technologies.

The product is at the heart of the JustSpeed infrastructure and performs all the tasks required by the company's administration, accounting and customer care department.

EXTENSIBLE

The CRM follows the evolution of the service as required by the market and the growing number of customers and is designed for maximum scalability.

XRM

It is a web application that connects the whole network of PG Italy affiliates, over 2000 subjects divided between providers, service, installers, operating staff, commercial officials, security personnel.

The software has managed in a few years several hundred thousand orders with related warehouse activities, automated billing and security documentation.

XRM Smart, an extension of XRM web, is a mobile application native to iOS and Android platforms that simplifies and speeds up daily work processes for electronic and telecommunications installers.

Among the functions of great impact on productivity and reactivity: the reading of products with barcode, Guided management of work orders, push notifications for instant viewing of critical events, even on the go and during field work.

It is the official app of the device **icontrol G** for self-monitoring of blood sugar. It offers patients with type 1 and type 2 diabetes, a clear and immediate glycemic diary, always at hand.

We also designed and developed the Bluetooth Low Energy (BLE) communication protocol with the hardware device, user interface and backend used by physicians and specialists to monitor their patients in real time remotely.

It is a web platform that allows you to book and buy online the health services offered by Italian private clinics. Timely availability management, fast payment, document management, web push notifications, make the project effective, interactive and modern.

24 hours a day | 7 days a week

Pomedo's vision is to build an online community of healthcare companies that facilitate interaction between patients and the public and private health service.

The platform is aimed at healthcare facilities, doctors and users.

Service Master is a provisioning engine that allows us to manage sales contracts, warehouse handling and automatic active/passive invoicing of service contracts in stores affiliated to a network.

The CRM is modular and extensible to include new commercial brands with related contracts and sales formulas.

ConEcoBonus is the document platform which allows to carefully organize the building renovations with particular attention to the process and bureaucracy of the 110% ecobonus.

The system proposes the mandatory steps in the order required by the legislation and is of great help to check the state of the art of each individual construction site.
